LAWN CARE PROTECTION PLAN

847-836-7406/main office 815-547-8333

The most Comprehensive Lawn Care Program available begins with the following Treatments, produced in 5 to 8 week intervals.

Early Spring Lawn Treatment

Starts Late Mar. to Apr.

(L1) The first Lawn treatment is most important. We need to stimulate growth for our best recovery from winter stress and help fill in thin areas where there is a potential for weed germination. We use the finest fertilizers with our exclusive Micro-Nutrient package along with Crab grass control, weed control and iron.

Spring Lawn Treatment

Starts in late Apr. to May

(L2) The spring is the best time to maximize are control over weeds and prevent annual grass germination. We use our customized fertilizers, pre-emergents for crab grass control, and iron to enrich color and growth. Then applying a special weed control we reduce perennial and annual weeds.

Early Summer Treatment

Starts in May to July

(L3) We Continue to use our special blend of fertilizers and pre-emergents to enhance growth , control weeds and annual grass. When weather is hot we use another customized blend of slow release fertilizer and iron to maximize our protection against summer stress.
(Guaranteed grub control is generally done with in the next 2 treatments, at an additional charge.)

Summer Treatment

Starts in July to Aug.

(L4) For our best protection from heat and drought stress we continue to use our customized blend of fertilizers, iron and spot treat any existing weeds.

Fall Treatment

Starts in Sep. to Oct.

(L5) The fall is another favorite time to treat the lawn and weeds. With the cooling temperatures and nominal rainfall we can replace needed nutrients and apply a customized weed control to maximize control over harder to control weeds.(Aeration and Overseeding is generally done with/in L5 and L6, at an additional charge)

Late Fall Fertility

Starts in Oct. to Dec.

(L6) By using Our custom blend of Fertilizers and Micro-Nutrients, we are increasing root developement and storing up nitrogen for winter to insure an early green-up next spring

(Surface insect control included with 4 visits or more)

HORTICULTURE PROTECTION PLAN

847-836-7406/main office 815-547-8333

The most Comprehensive Tree and Shrub Care Program available begins with the following Treatments, produced in 4 to 8 week intervals.

Horticulture Oil Treatment

Starts Late Feb. - Mar.

- (H1) A Dormant oil is the most environmental treatment to use when protecting your plants against harmful insects and mites that over-winter in the crotches, crevices, foliage, and needles of trees, shrubs, and evergreens.

Spring Root Zone Fertilization

Starts in April to May

- (H2) This is one of two most favorable times to feed Trees and Shrubs valuable nutrients that are necessary for their survival. We deliver this to you with the most professional and highly efficient injection system known to the industry.

Insect/Disease Protection

Starts in April to May

- (H3) The Spring rain, wind and warming temperatures all contribute to the onset of many types of insects and diseases. All of which can be minimized with our first early spring foliage application.

Insect/Disease Protection II

Starts in May to July

- (H4) Because of the multiple generations of insects and the many different fungi that pose a damaging threat to your Trees and Shrubs its necessary for repeat applications to maximize health and beauty.

Mite/Insect Protection

Starts in Aug. to Oct.

- (H5) Although the majority of are diseases are past we still have to contend with mites, mite eggs, and a variety of insects that lay eggs in late summer and early fall. By controlling insects and mites this time of the year we can insure maximum protection for your trees and shrubs.

Fall Root Zone Injection Fertilization

Starts in Sept. to Nov.

- (H6) The fall is the best time to fertilize our Trees and Shrubs. Not only will this treatment help plants recover from summer stress and store food for winter but it will also help develop healthy buds for full leaves, stronger branches, fragrant flowers and delicious fruit.
